

Peste des Petits Ruminants Virus, Mauritania

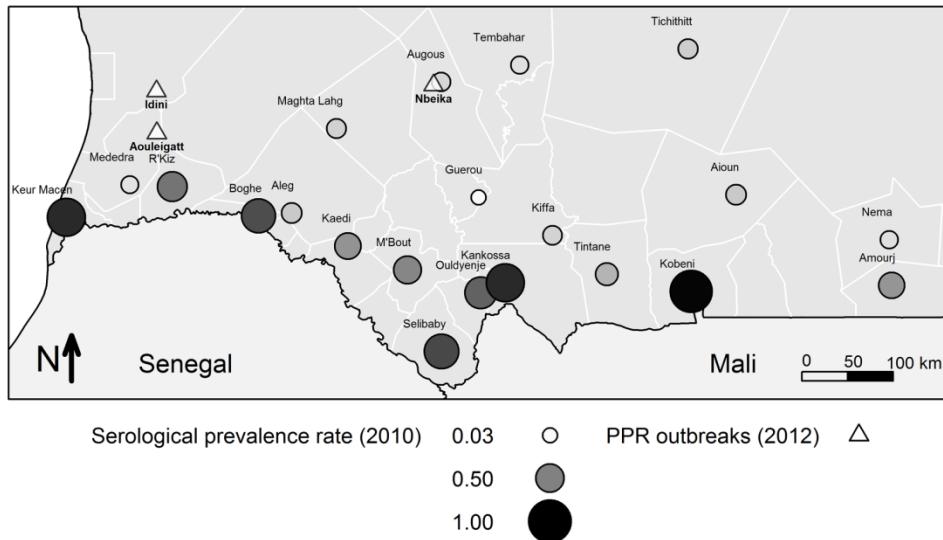

Technical Appendix

Technical Appendix Table. Serologic prevalence rate fitted with a beta-binomial regression model and 95% confidence interval for peste des petits ruminants in Mauritania, 2010 ($n = 1,904$ sheep and goats)

Latitude	Fitted prevalence rate	Lower limit	Upper limit
15.1; 16.2	0.65	0.59	0.71
16.2; 17.3	0.34	0.28	0.39
17.3; 18.4	0.21	0.14	0.29

Technical Appendix Figure 1. Small ruminant density in Mauritania: number of sheep and goats by square kilometer (\log_{10} scale). Densities were adjusted to match 2005 national totals (1).

Technical Appendix Figure 2. Observed peste des petits ruminants (PPR) virus seroprevalence rates in Mauritania, 2010 ($n = 1,904$ sheep and goats), and reported peste des petits ruminants outbreaks in early 2012. Circle size is proportional to PPR seroprevalence rate.
